Health Assistant

patient protection

Intelligent drugs internet search engine

- *revolutionary information and educational tool that combines medical knowledge and the latest IT technology*
- *it guarantees new quality in terms of access to medical knowledge based on artificial intelligence*
- *tool allows choosing easily appropriate drug*
- *meducit is complete and the only solution in Poland, suitable for patients who seeks additional information on available drugs and diseases*
- *this tool is also alternative source of information after doctor`s visit*
- *thanks to meducit user can easily find detail information on drugs based on drug name, symptoms or disease name*

Project idea/ Company expertise

Health Assistant

- ***A chatbot installed on a webpage which talks with the users in natural language and in such a way serves clients and delivers them required information***
- ***Patient needs: efficient and effective information about health***
- ***Traditional solutions: doctors visit, call center, classic webpage***
- ***Client no longer has to contact the primary healthcare, nor does he have to tediously browse the content of a webpage. All he has to do is to ask Virtual Assistant a question who instantly provides a precise answer***

Our company

PharmVision- startup

Our company we founded in Warsaw, was previously the idea of people with experience in the medical, pharmaceutical and project management.

In general, the aim of our project is to create a tool 360 for the patient read Internet user who is looking for health information. The product will primarily be:

- reliable (knowledge base about drugs Pharmindex)
 - flexible which will take into account various "strange" question
- (IT solutions provider - Stanusch Technology)
- knowledge base of drugs and OTC we can supply the German, French and Spanish market (other names of drugs).

Partners

Stanusch Technologies S.A. is an innovative firm conducting research and development in the field of artificial intelligence (AI) and Big Data since 2003 and offering its services for business in a software-as-a-service (SaaS) model.

- **Our services are based on an internally developed platform called Enterprise Smart Data which operates using complex AI algorithms, natural language processing techniques and semantic search mechanisms.**
- **Our references comprise more than 120 projects, mostly for renowned corporations and institutions.**

Company support/drug knowledge database
