Country based patient bad capacity requirements  
measurements

# Topic

Personal Computer Coaches  
Patient bad needs  
Healthy Ageing  
Mental health  
ICT solutions for well-being

In the past I worked as researcher and high level executive in the Information Technology Industry. I can bring my experience and information to the new projects and concepts as I currently work multidiscipline style as technologist!

That is why, I would propose to develop an idea first and new product later in telemedicine industry; I believe that medical industry still needs using more technology in right place and time. I can contribute this with my past experience and information.

My personal area is usually web technologies and how to use it in medical industry.

That is why, I would like to meet related partners and project owners.
